Pain VS No Pain

We will be applying transfer learning to a pretrained Audio Spectrogram Transformer.

Hugging Face Model: MIT/ast-finetuned-audioset-10-10-0.4593

The goal is for this model to correctly identify if the given spectrogram

Model Configuration

Drop out layers and Early Stopping were added to the model in order to prevent the model from overfitting and memorizing data during training

```
!pip install -U transformers
```

```
